s.no	bug	status
1	Need to handle duplicate article, category, sub category names. Currently database is throwing error for that	done
2	Need to maintain modification of articles to show submission in previous versions of forms	done
	When form opens in edit mode the height doesn't get set.	done
	Add pagination to the event list on the front end and on the back end	done
	Add pagination to the list of forms	done
	Reload page after updating article settings	done
	Success msg on editing user and creating new user needs to be green	done
	Css for change password	done
	Don't show back and next arrows ewhen there is no article or only one articl;e	done
	Add some indication to mark end of slide show:- best low cost solutions is hide the next button on last article and hide back on the first article	done
	Highlight active event and strip the length of event name and add tooltip containing full name of event	done
	Confirm titleId is getting right value in category and subcategory tables	
	Check if builder is allowing radio buttons and checkboxes with different name s can have same value and find low cost solution.	Not a priority and left for later
	Parse category, subcategory and article names before submitting to database (strip special characters)	done
	Remove new user icon from the add new user view	No need this module not required any more
	Maintain the consistency between css of all lists	done
	Place toggle function in some helper instead of every view	done
	Change the current page name at the log in page from administrator to Log In	done
	The success msg on password change should be green. And the height of the page	done
	Event list in backend show latest event at top	done
	Adjust the min height of particular category list view	done
	Colour enabling disabling error into red at the manage home page.	done
	Add error on clicking enable or disable when no record is selected	Add it later when search module

			will start working
	In manage home page change status list heading to enabled	done	
	Find a way to show errors on exceeding database limits.	later	
	Find a way to add personal videos at the home page	later	
	Block the direct access to img, css and js folder	done	
	Make another module to upload images and videos to the server and then link image tag and video tag of home page to this folder.	later	
	Try to make search in list views work	later	
	Adjust the submission button position on the front end	done	
	Correct the errors on sunbmission		
	Block the resize option for text area at frontend track submission and in read mode	done	
	Min-height for form list and submisssion list in track submission	done	
	Correct the name shows in the breadcrumb on the front end	done	
	Not getting file name on sending submitted copy	done	
	Sending email from read	done	
severe	On updating article name update the name of pdf if exist.		
functionality	Show list of all the pdfs and allow deleting them	done	
severe	At the time of article edit when adds new dd drop down [] sign don't come with in name field		
	Rows and cols not working for textarea because setting width and height		
	Size not working for drop down because setting height		
severe	In textarea attribute names is incorrect make it cols instead of columns		
	Add one more column in article list which gives the name of parent		

Tips for builder:

Enter gets new div or p tag

Shift+enter gets you br tag

Any text copied from text file, word doc and typed can be formatted automatically but text copied from pdf can't you need to format it from the source code. Most common flaw will be with width of html elements.

The coordiantes and height and width should be less than 999px and must be whole number otherwise database will reject your input.

Usefull Info:

On changing password while application is running on firefox it will show a dialog box "please confirm which password you want to change". There is no need of worrying about it it has no effect on application. To getrid off this go to options->security->uncheck "remember password for sites".

In tracking submissions if user is looking at previous submission after which form has been changed and forValue for the label is changed the in older version you won't be seeing any label for that control.

Don't make changes to the values and display text of drop down it will cause error.

Search functionality at the top of category, subcategory and article list is missing.

There is no restriction over the length and the mix of password.

The employee Id can't start with zero.
